

 **KOBALT**®

Seven tough tools. One versatile battery.

The Kobalt 40V Max Outdoor Power Equipment (OPE) line features 7 tools tough enough to take on anything you need to do in your yard. The complete line includes a string trimmer, a hedge trimmer, two mowers, a blower, a chainsaw, and a polesaw — all working off the same rechargeable, interchangeable battery platform. If the battery in one tool runs out, just pop in a battery from one of the other tools in the line and keep on going. By switching out batteries as you go, the Kobalt 40V Max line will probably run a whole lot longer than you can.

The heart of the Kobalt OPE line is a high-performance 40V Max, lithium-ion battery platform that delivers fade-free performance — that means every battery, every tool delivers full power up until the point where the battery runs out of juice. Then you just pop in another battery and keep working at full power.

There are other tools that run off gas or with cords that do a lot of the same jobs as the Kobalt 40V Max line — but the Kobalt OPE line does them better and easier. Since the Kobalt 40V Max line runs off rechargeable batteries, there's no gas to refill. No pull cords. No fumes. No messy gas or oil to mix. And no extension cords to get tangled up in or to cut while you're

trimming. And that's the kind of freedom you need when you're working around the house.

Kobalt built its reputation on tough, dependable lines of hand tools and mechanics tools with distinctive, industry-leading features — and now the Kobalt 40V Max line is the next step in that tradition of toughness.

The Kobalt team really rolled up its sleeves when developing the Kobalt 40V Max line. We invested countless hours in consumer and product research, product design, and exhaustive quality assurance testing to bring you outdoor power tools that deliver the perfect balance between performance and affordable value.

Need proof? These tools are so tough that Kobalt stands behind them with a best-in-class, 5-year hassle-free guarantee — and they're only available at Lowe's.

To see how all seven tools in the Kobalt 40V Max line give you the power to team up on your yard, visit Lowe.com/Kobalt40

Kobalt® 40V Max String Trimmer/Edger

Most cordless string trimmers are single-line models, but the Kobalt string trimmer cuts with two lines, which normally you'll find only on gas-powered trimmers.

With its dual line, the Kobalt string trimmer cuts a path 12 inches wide. And since the line feeds automatically, you can trim faster without stopping, because you don't have to bump the cutting head to get more line.

A variable speed trigger gives you more power control and also makes it easy to maneuver around landscaping.

So how long does that power last? You can cut up to 1.75 miles on a single battery charge, which gives you plenty of time to tackle your entire yard.

The Kobalt cordless 40V Max string trimmer is also as tough as it is powerful. Most string trimmers are designed to break down into separate parts, or have wobbly wheels when you convert them to an edger. But not the Kobalt string trimmer.

This is one serious, full-sized trimmer — just flip over its wraparound handle and start edging.

Kobalt® 40V Max Blower

The Kobalt 40V Max Blower delivers performance that's surprising for a battery-powered blower — and you never have to fight with extension cords, fumes, mess, noise, or pull cords like you do when using a gas-powered model.

Unlike a lot of other cordless models, the Kobalt 40V Max Blower is not just some sweeper for blowing clippings off your driveway.

This blower is capable of moving 250 cubic feet of air per minute, with a wind speed of 140 miles per hour. That's power comparable to gas-powered blowers — so yes, you bet it can clear leaves off your lawn.

It's lightweight — just 5.2 pounds — with a compact design perfectly balanced for moving debris around your yard, and a variable speed trigger to help you control all that power.

Kobalt[®] 40V Max Hedge Trimmer

The Kobalt 40V Max hedge trimmer combines incredible cutting speed and power with the freedom of working without a cord.

With a cutting speed of 2800 strokes per minute and an industry-maximum, 3/4-inch cut capacity, the Kobalt 40V Max hedge trimmer can tear through hedges and shrubs in nothing flat.

Its 24-inch, dual-action blades also extend your reach so you can make short work of those tough-to-reach spots.

And since the Kobalt hedge trimmer is powered by a rechargeable 40-volt, lithium-ion battery, there are no extension cords to get tangled up in or to cut while you're trimming.

Kobalt® 40V Max 20-in Mower

The Kobalt 40V Max Doublecut mower is powered by two batteries – one 2.0 Amp-hour Quick-Charge battery and one 4.0 Amp-hour Long-Run battery.

It delivers power and performance without having to put up with fumes, noise, messy gas refills, or pull cords.

With this dual-battery system, one battery automatically switches over to the other, extending the mower's run time without having to stop to swap them out.

Its dual blades give you the superior cutting capacity you need to power through tough grass, while its 2-in-1 mulching / bagging feature gives you a couple of ways to keep your lawn clean and healthy.

The Kobalt OPE Doublecut mower is lighter and quieter than many gas mowers, and changes mowing height easily with a 7-position single-level height adjuster.

Its cushion-handle grip is also designed to keep your hands comfortable while mowing.

Kobalt® 40V Max 19-in Mower

The Kobalt 40V Max 19-inch mower comes with a 2.0 Amp-hour Quick-Charge and a 4.0 Amp-hour Long-Run battery. When one battery runs out, just swap it out and keep mowing.

A versatile 3-in-1 feature gives you the freedom to switch back and forth from your choice of mulching, rear bagging, or side discharge options.

It has a tough, 19-inch steel cutting deck, with 10-inch rear wheels and 7-inch front wheels to help you cover ground quickly.

No matter how long it's been since the last time you mowed, the 19-inch model's 7-position, single-level height adjuster makes mowing easy.

It also has a cushion-handle grip to keep your hands comfortable while mowing.

Kobalt[®] 40V Max Chainsaw

This chainsaw delivers all the power and performance you expect from a serious chainsaw, without the pain of having to mix oil, refill gas, pull start cords, or put up with annoying fumes and noise.

The Kobalt 40V Max chainsaw gives you the power to make up to 75 cuts on 4x4 pressure-treated lumber with a single battery charge.

It's 12-inch steel bar is sized just right to take on almost any job in the yard, while its low-kickback chain helps you cut back everything but your safety.

An automatic oiler and tool-free chain-tensioning make maintenance as easy as this chainsaw is tough.

Kobalt® 40V Max Pole Saw

The Kobalt 40V Max pole saw gives you the ability to take tree trimming to new heights.

Use the optional extender to reach heights of up to 10 feet, 9 inches, or remove it to give the saw greater maneuverability and control.

Easy-to-adjust chain tensioning also helps you cut down on maintenance with less downtime while you work.

Kobalt® 40V Max Lithium-ion Battery and Charger

Kobalt® 40V Max Battery

The source of the Kobalt 40V Max line's nearly inexhaustible performance is its rechargeable, interchangeable, lithium-ion battery technology.

This lithium-ion battery system generates up to 40 volts of hard-working power that won't drop off or fade until the battery runs out of juice completely, yet it's versatile enough to work with every one of the seven tools in the Kobalt 40V Max line.

The 4-Amp-hour Long-Run battery gives your Kobalt outdoor power tools incredible runtime – it comes standard with both mowers or can be purchased separately.

The 2-Amp-hour Quick-Charge battery balances a long runtime with a surprisingly fast 60-minute recharge time.

Whether you pick up multiple batteries or several different tools, every battery backs up each tool in the Kobalt 40V Max line. Just pop one battery in a tool or in the charger, and get down to business. When the battery you're using runs out of juice, just swap it out for a fresh one and finish what you're doing.

Each battery is backed by a best-in-class three-year, hassle-free guarantee.
